

Quickguide MeteoPILOT SkyPM / Weather Routing

→ Double-click MP4-button and start the program
→ Check, if MP4 is licensed in Coastal/DS or SkyPM mode. If not:
create/send a license request and/or load a valid license.zip file into
your MP4.

→ request for weather data (single request or subscription) via
catalogue- or WoD-request

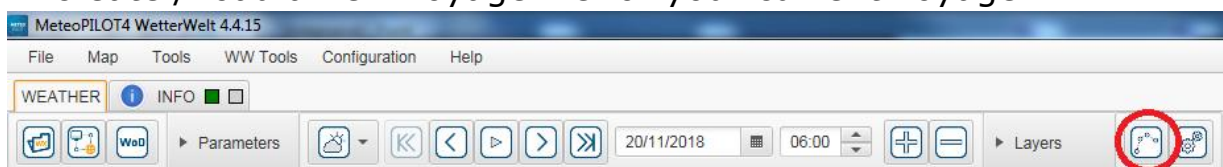

→ once the weather file has been received, load the latest weather
forecast files into M P4 (daily updated WX-file is recommended!)

→ create / manage your speed and consumption profiles for usage in
your voyages

→ create / manage your route templates for usage in your voyages

→ create / load a new voyage file for your current voyage

→ make route planning / cost optimization within the loaded voyage

→ track your vessel within this voyage: insert 'waypoints' / change to
'reported points'. Iterate your voyage planning base daily updated
weather forecast and position report in MP4.

If SkyPM-mode is use with V-PER system:

→ activate voyage for connecting with V-PER system
