1. Summary:

WetterWelt **METEO** PILOT is designed as an onboard weather routing software – as well as a fleet management tool for route planning and tracking different voyages simultaneously.

It provides a route management tool, easy to handle weather data requests and extensive display function with integration of weather and voyage planning/tracking data. ETA- and cost-calculations based on individual speed and consumption profiles of a vessel can be achieved with only a few clicks.

WetterWelt **METEO** PILOT DEMO is free of charge available via <https://shipping.wetterwelt.de/downloads>

The program requires at least a screen resolution of 1024x768, 500 MB free disk space and at least a Windows 7 64bit-system.

For 32bit systems, a version 4.5 x86 is still available.

The performance of the program can be improved, when the max. RAM allocated by the program is adjusted manually. If required, then please contact your system administrator / WetterWelt.

2. First Start – DEMO Mode, License Request:

- After successful installation double-click **METEO** PILOT-button on PC Desktop and start the program.
- Decide whether to start the program in DEMO-mode or to set up a license request.

MANUAL

HOW TO request/import licenses in METEO PILOT

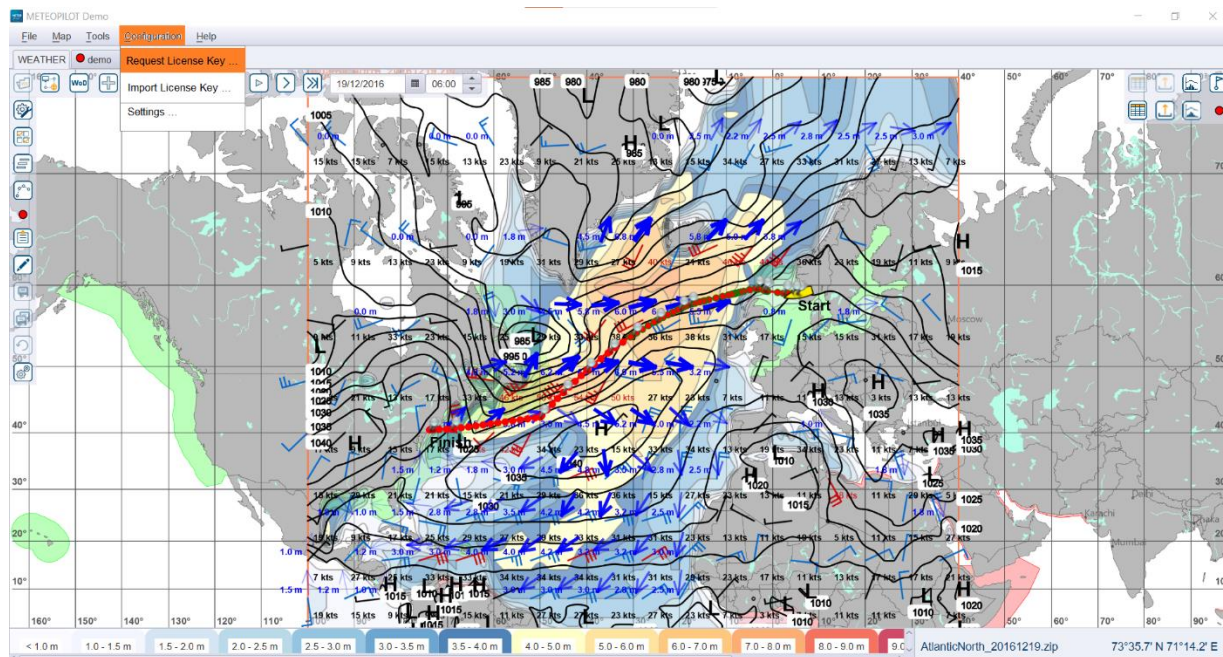

→ Run as DEMO:

Program starts in DEMO-Mode.

→ REQUEST a License:

Go to: -> Configuration -> Request License Key

www.WetterWelt.de

Insert your personal data:

Request license

Send your product id or full license request to WetterWelt

Organisation: Shipping Company

IMO Number (or 'Office'): 1234

Name or vessel name: Name

Email address: email@email.com

☐ Send product id

☒ Full license request

Product: Deep Sea

Valid From: 1/25/2024

License period: One year

Product Id: f259db1dce5ca3b0d384613dc25f1121

Send via: Save as file

Submit Cancel

Choose option 'Full license request' -> you want a single, individual license for **METEO** PILOT (Are the licensing details in your request required or are there agreements with your company?)

There are three options for sending the license.request file:

MANUAL

HOW TO request/import licenses in METEO PILOT

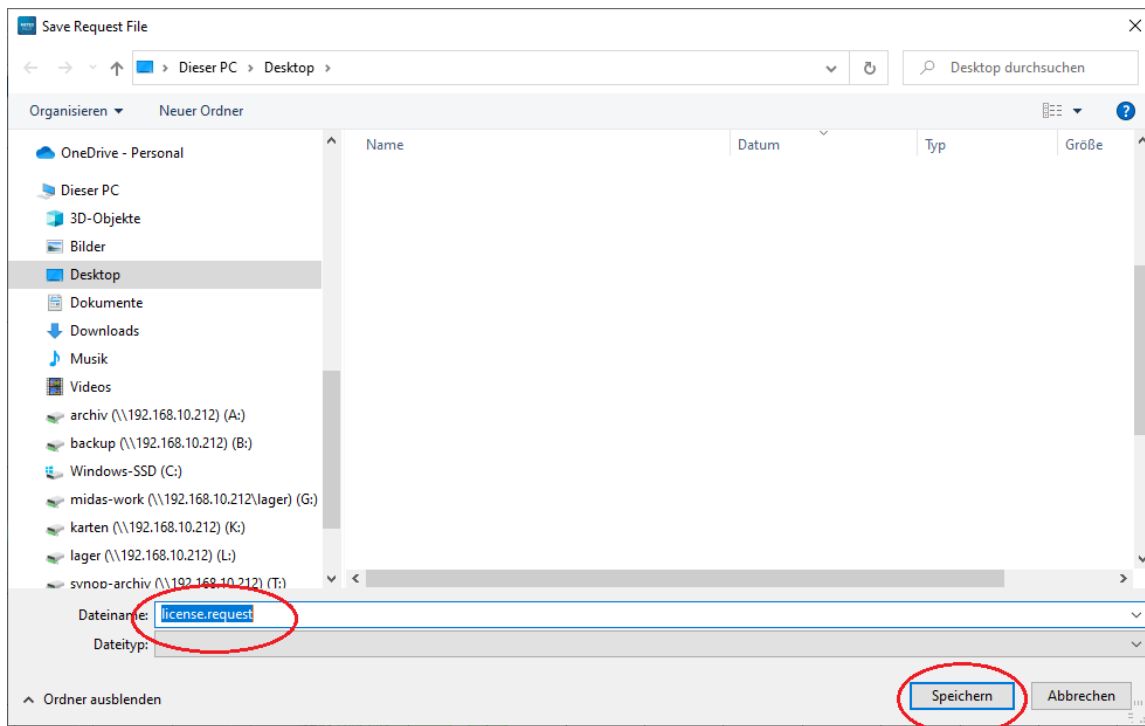

(A) Via 'save as file' to send request as email attachment:

Choose 'Save as file' -> press "Submit"

The 'Request license' dialog box contains the following fields and options:

- Organisation: Shipping Company
- IMO Number: 1234567
- Name or vessel name: Name
- Email address: email@email.com
- Send product id (radio button)
- Full license request (radio button, selected)
- Product: Coastal (dropdown)
- Valid From: 3/4/2018 (calendar icon)
- License period: Two weeks (dropdown)
- Product Id: 7b05f70fb7473a27b285e29a8843932d
- Send via: Save as file (dropdown menu, with 'Internet' and 'Save as file' options visible)
- Buttons: Submit, Cancel

-> Save license request file on your local drive.

Open a new email and attach this file. Send the e-mail to:
routing@wetterwelt.net / meteopilot@wetterwelt.net

(B) Submit request directly via internet:

Choose 'Internet' -> press "Submit"

The program will directly send the request to WetterWelt (requires an internet connection!)

(C) Submit request directly via E-mail:

Requires your personal email settings (Host, Port, password etc.), that can be inscribed via Configuration -> Settings... -> E-mail

Then license request will be sent automatically via your e-mail account

With this option WetterWelt receives your request and gets in contact with you / your office within 24 hours.

After clarifying the license details and the accounting details, WetterWelt sends your license file as attachment via email.

Please note:

Each customer license allows a maximum of 3 PC-installations, but you need to send a license request for each installation.

Each installation creates its own Product-ID. They are stored customer-related and managed from WetterWelt.

For each Installation / Product-ID you will receive your license file.

HOW TO request/import licenses in METEO PILOT

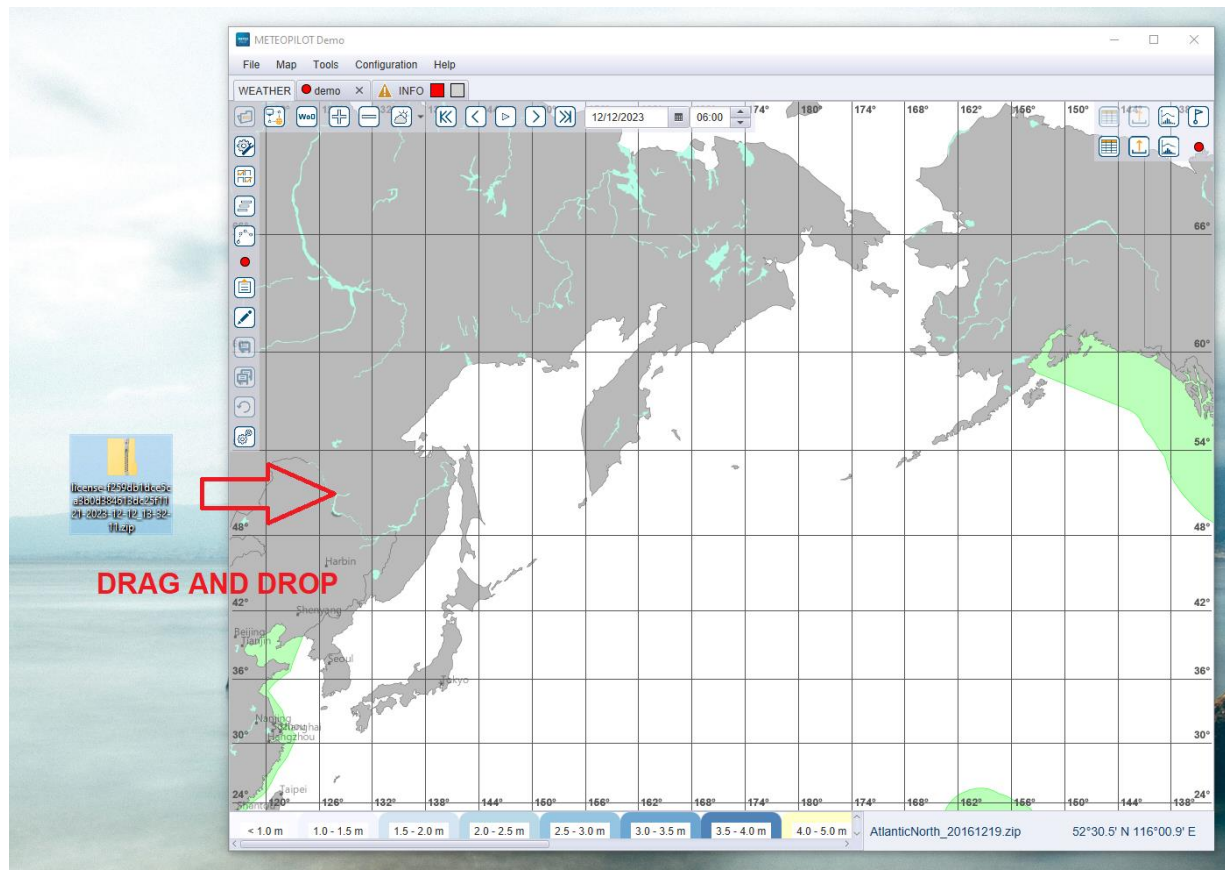

3. Import License-file into METEO PILOT:

The license-file will be provided to you as an email attachment with the name: 'license-**<Product-ID>.zip'**

-> save this .zip-file on your computer and import the license file. There are two ways to import the license-file:

(A) Drag and drop

Drag and drop the file into the weather screen.

(B) Via main menu:

Go to: menu bar -> Configuration -> Import license key

With the full version you now have access to:

- load / download current weather forecast files
- use route planning and cost calculation tool
- import / export speed and consumption profiles
- manage different voyages at the same time (fleet monitoring)
- access to climate data

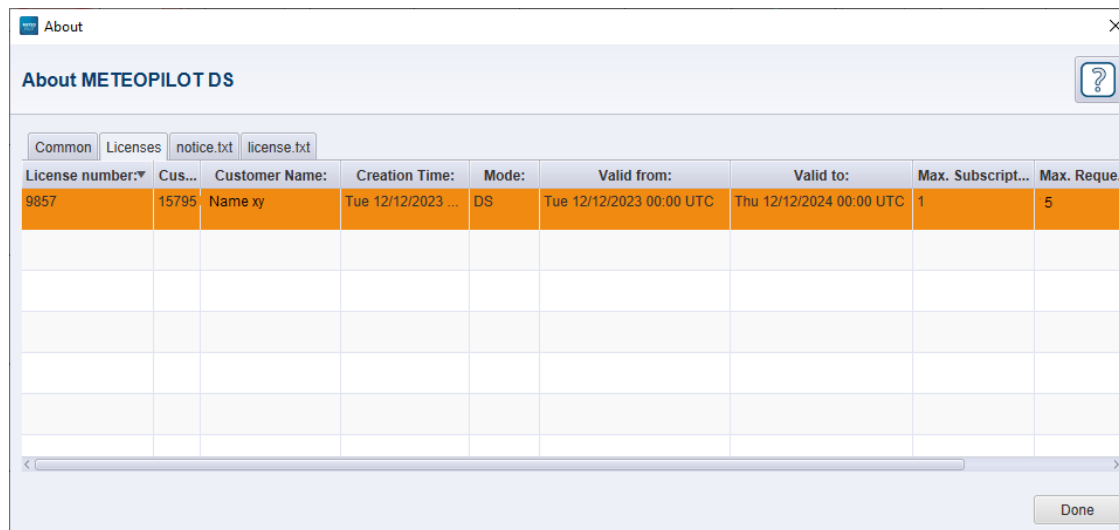

4. Get Information about Imported Licenses:

The full version of **METEO** PILOT runs normally in 'DEEPSEA' mode.

(Sky PM-mode available on request)

Your program mode is shown in the upper left header line.

If you want to see further details of your license, go to: main menu → Help
→ About

The screenshot shows a window titled 'About' with a sub-header 'About METEOPILLOT DS'. Below the header are four tabs: 'Common', 'Licenses', 'notice.txt', and 'license.txt'. The 'Licenses' tab is active, displaying a table with the following data:

License number:	Cus...	Customer Name:	Creation Time:	Mode:	Valid from:	Valid to:	Max. Subscript...	Max. Reque.
9857	15795	Name xy	Tue 12/12/2023 ...	DS	Tue 12/12/2023 00:00 UTC	Thu 12/12/2024 00:00 UTC	1	5

At the bottom right of the window is a 'Done' button.

The table shows all licenses that have been imported into **METEO** PILOT and the ones that have not been deleted so far.

The valid license is shown in orange.

You can delete all licenses using the delete button.

Old licenses can be deleted without any further program action.

If you delete all valid licenses, the program switches back to DEMO mode.

If you have different licenses, the program switches to the newest license.

New licenses can be requested from WetterWelt at any time.

Integrated in the license are the following settings:

- max. subscription number (i.e. weather subscriptions at the same time)
- max. request number (i.e. single weather data requests per day)
- max. file size (i.e. max. estimated size of the requested weather data; weather files greater than max. file size cannot be requested).

Attention:

With each licensing, you can run the **METEO** PILOT on max. **three** workstations. For each workstation you need to submit an individual license request and import the associated license file.
